

Sailboats

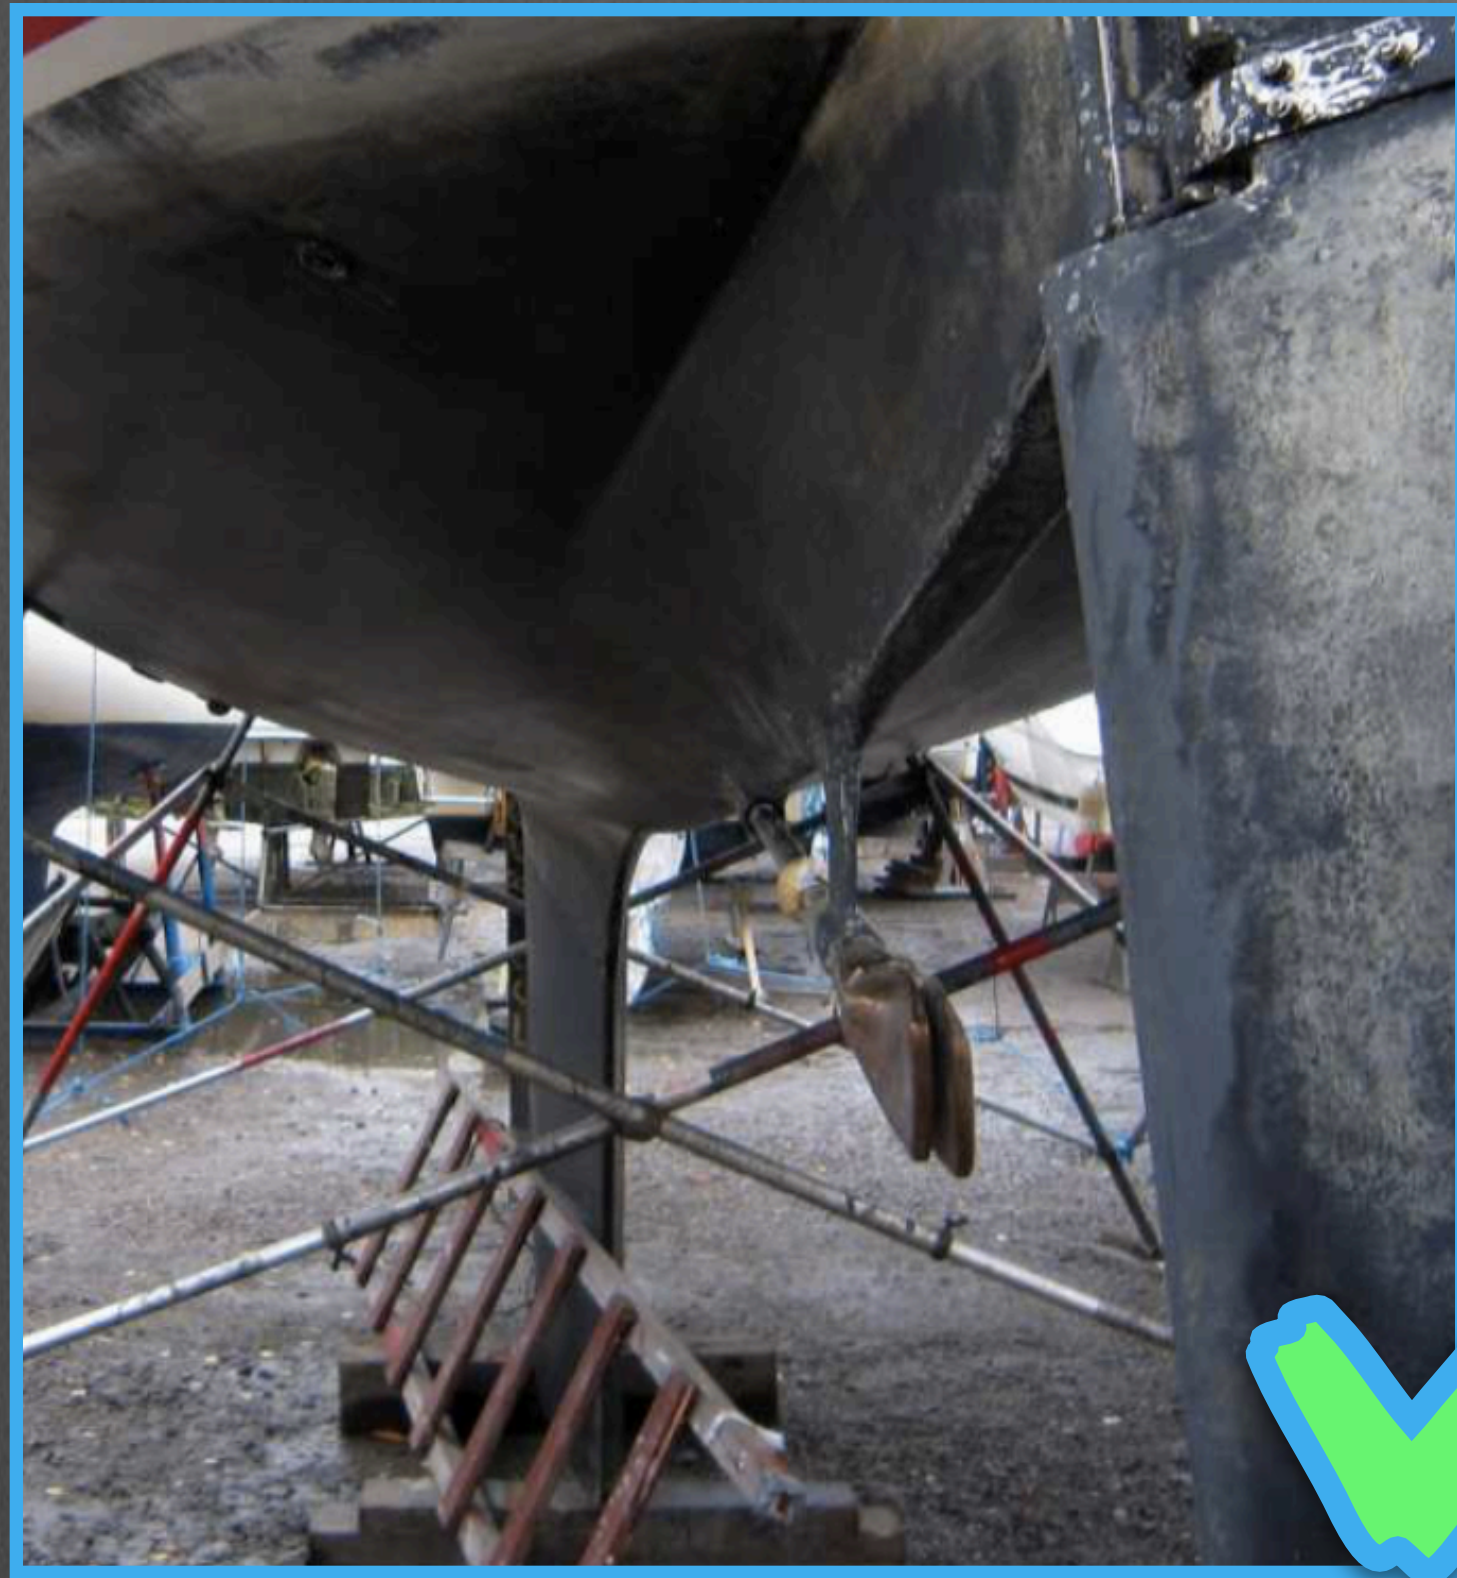

The machine is capable of cleaning sailboats with drafts shorter than 2,3 meters (the vertical distance from the waterline and the bottom of the keel). The distance from the bottom of the hull to the bottom of the keel can not be longer than 1.6 meters. The bulb width must be less than 45 cm. If the draft exceeds 2.3 meters in length, the sailboat will not be able to enter the machine. If the sailboat has a bulb with winglets, a wing keel or twin keels, the brushes will only be able to wash the hull up until the point where the draft begins, and no longer.

Sailboats

Washable

Sailboats with a centered shaft and draft

Sailboats with a straight draft or bulbs no wider than 45 cm

Sailboats

Non washable

Sailboats with winglets, wings or bulb shapes wider than 45 cm, or draft/keels that are not centered can not be cleaned beyond the draft.

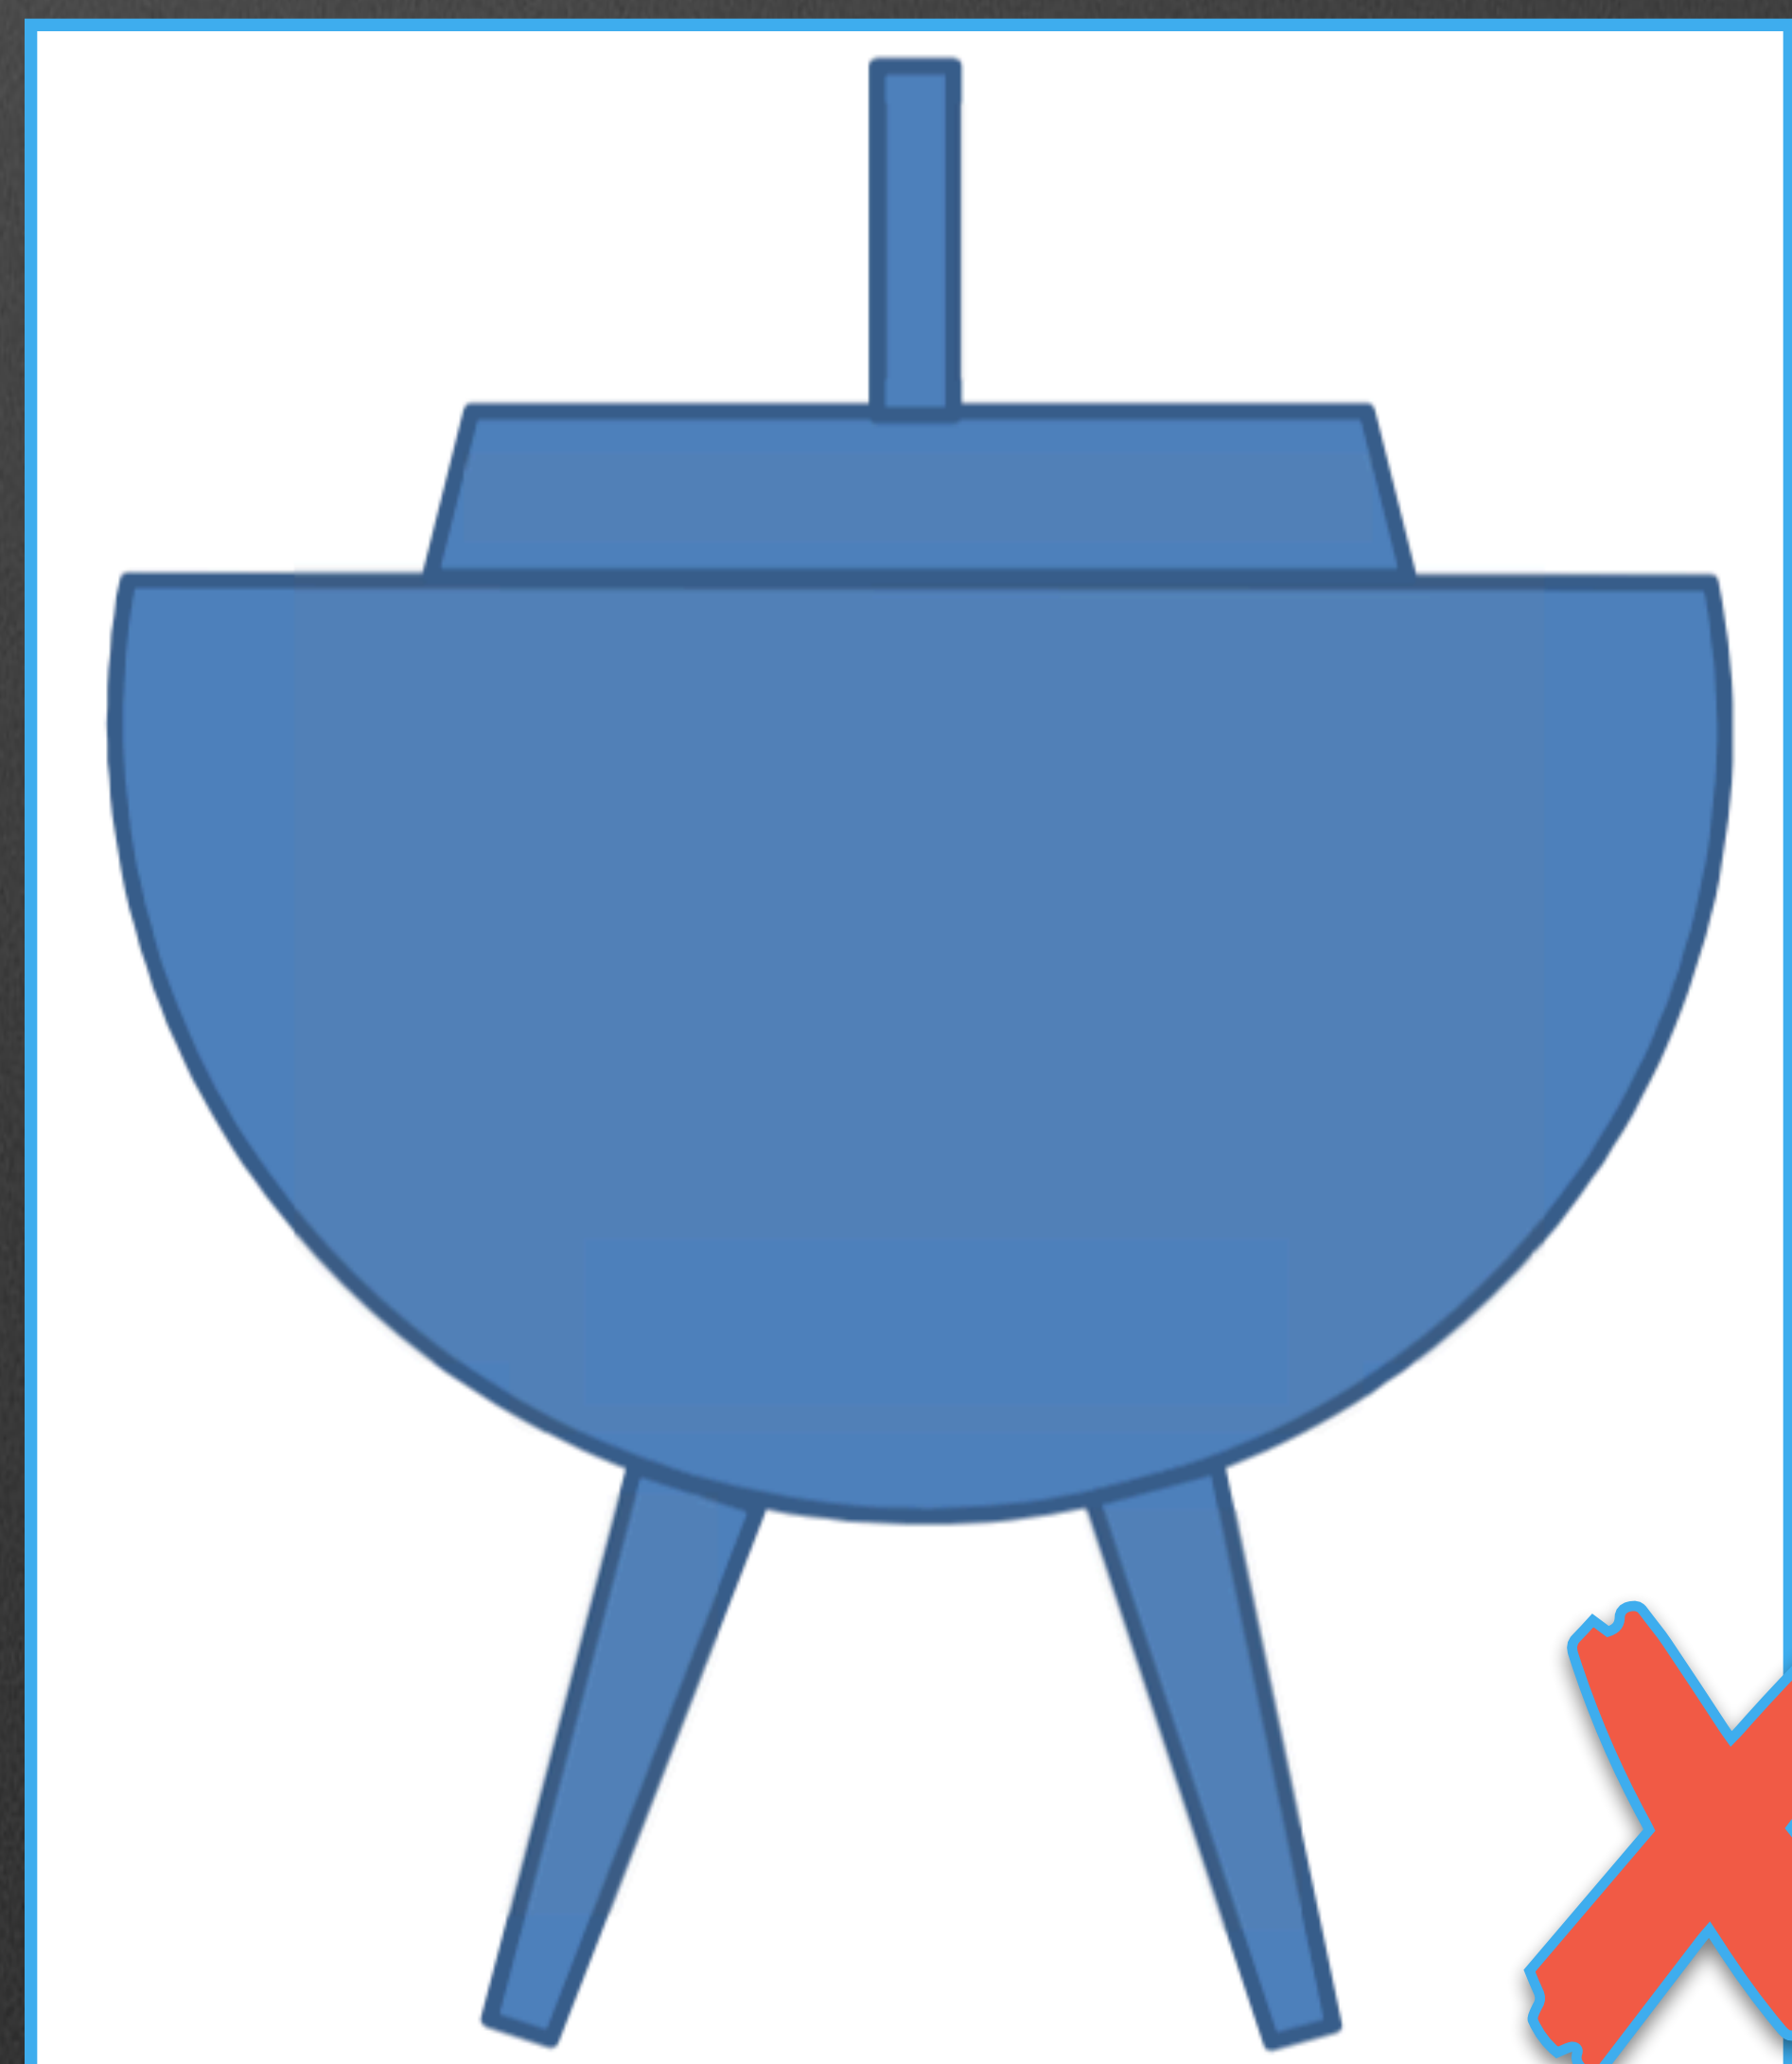

Bulbs >45 cm

Wings

Flat bulb

Twin keel
